PROFESSIONAL SUMMARY

Junior Full-Stack Developer focused on React, Next.js, and TypeScript. Builds production-style products with responsive interfaces, typed APIs, authentication, and database-backed workflows. Recent NBCC Software Development graduate with professional internship experience.

TECHNICAL SKILLS

Core: React, Next.js, TypeScript, JavaScript, Node.js/Express, Python/Flask, REST APIs
Data & Delivery: PostgreSQL/Supabase, MongoDB, Git/GitHub, Vercel

EXPERIENCE

Software Development Intern - Beetech Solution Ltd. | Apr 2026 - Jun 2026

- Developed and tested frontend/backend features, CRUD workflows, validation, database-connected functionality, bug fixes, and feature verification within an established team workflow.
- Delivered a rating feature and began a new CRUD web project; documented progress, debugged issues, and incorporated supervisor feedback.
- Used Git-based development workflows and earned 5/5 for dependability in the final internship evaluation.

SELECTED PROJECTS

ShopPilot - Merchant Operations Dashboard | React Native, Expo, TypeScript, Supabase, PostgreSQL

- Built a cross-platform merchant operations dashboard for products, inventory, orders, store settings, image storage, revenue, and analytics across web, iOS, and Android.
- Implemented Supabase authentication, protected routes, session recovery, product CRUD/image storage, order fulfillment/refunds, and merchant-isolated PostgreSQL Row Level Security.
- Separated UI, session state, typed data access, storage, domain models, and business rules so screens consume reusable APIs instead of direct database calls.

ScheduleBooker | Python, Flask, PostgreSQL, JavaScript

- Contributed responsive booking, login, dashboard, and appointment-management interfaces for a multilingual scheduling platform, integrated with conflict-safe availability and PostgreSQL-backed workflows.

Live: schedulebooker-web.onrender.com

License Plate Assignment API | Node.js, Express, MongoDB, Mongoose

- Built VIN-based assign, revoke, and verification endpoints backed by MongoDB; added API-key authentication, rate limiting, Helmet/CORS, uniqueness handling, and centralized errors.
